TigerGraph

Branding Overview

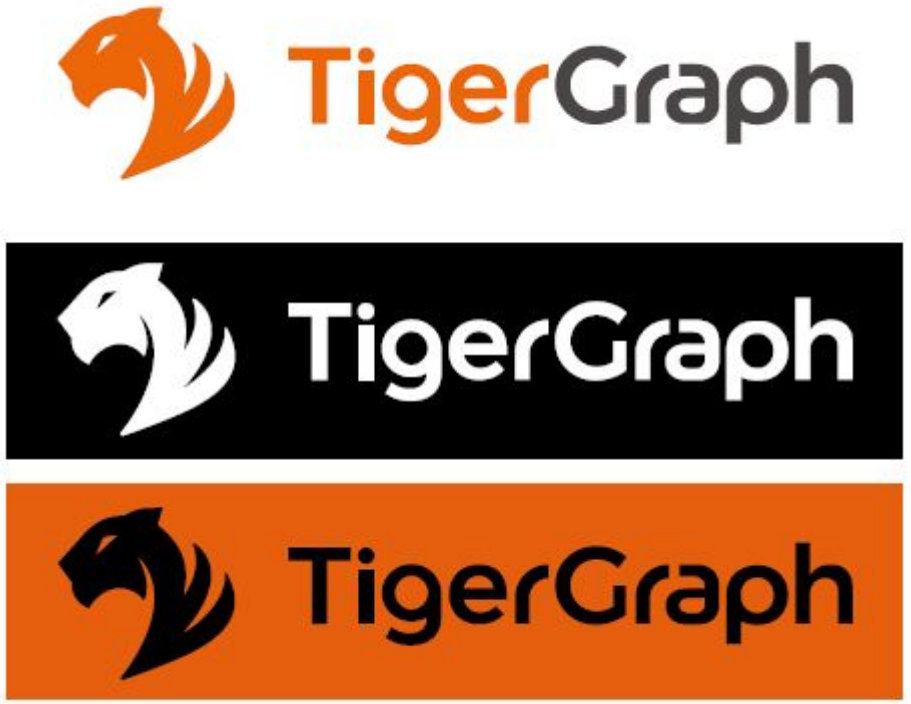

October 2025

TigerGraph

Logo

The TigerGraph logo is a combination of the wordmark with the tiger head symbol. We want it to be instantly recognizable, so consistency is important - **please do not edit, change, distort, recolor, or reconfigure it.**

The full-color logos should be used only on white, black or orange backgrounds.
Avoid using full-color logos on photographs unless the logo sits on a black or white area of the image.

Full Color
Our primary logo is Orange and Grey. This version of the logo is always used on clear white or light-colored backgrounds to maintain legibility.

Alternate White
When used on dark and colored backgrounds, the logo should be all white to maintain legibility. This will provide a striking contrast allowing the logo to be clearly legible.

Alternate Black
For use on black and white publications

Logo Spacing

The TigerGraph logo is a combination of the word mark with the tiger head symbol. We want it to be instantly recognizable, so consistency is important - please don't edit, change, distort, recolor, or reconfigure it.

The TigerGraph logo must stand out clearly from its surroundings - the bordering space on all four sides must be at the height of the letter "e" in TigerGraph.

No other type or graphic elements should appear within the clear space area.

The smallest allowable size in the height for the logo is 4mm. If the logo must be rendered smaller than minimum size, either use the TigerGraph logo without the tiger head, or plain text.

The logo should never be used less than this size as this would compromise legibility.

Color Palette

Color is an engaging and vibrant way to display a brand's character and is an integral part of the identity.

Our colors are bold, enthusiastic and full of energy. Color is an essential ingredient for a strong and memorable brand.

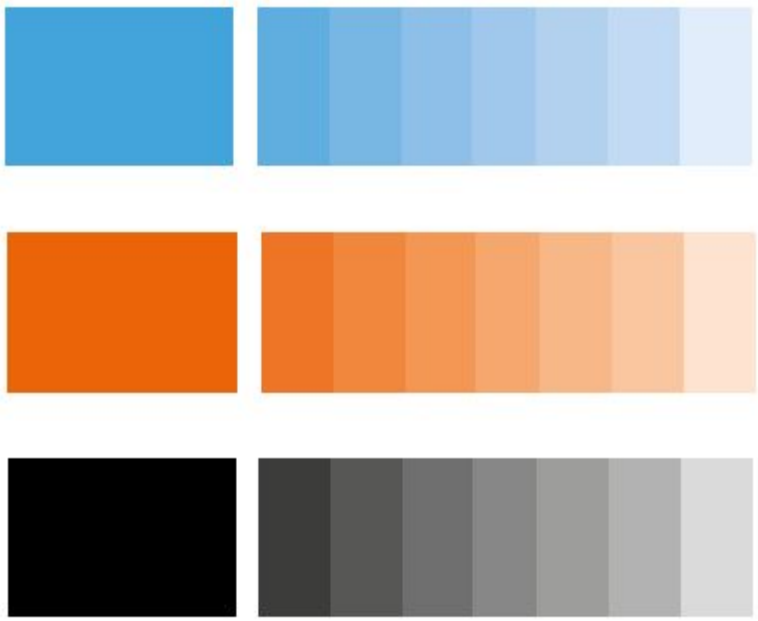

Consistent use of these colors will contribute to the cohesive and harmonious look of the brand identity across all relevant media. To ensure a unified brand, it is important
to use these colors and these colors only.

Color choice will appear differently on each computer monitor and will vary from monitor to printed piece. To ensure print material color consistency, be sure to use the CMYK color formulas. For web color consistency, use the RGB or HEX formulas.

TG Blue
CMYK: 69 | 20 | 0 | 0
RGB: 67 | 164 | 220
HEX/HTML: 43a4dc

TG Orange
CMYK: 0 | 71 | 100 | 0
RGB: 236 | 100 | 0
HEX/HTML: ec6408

Black
CMYK: 0 | 0 | 0 | 100
RGB: 0 | 0 | 0
HEX/HTML: 000000

Typography

Print and Web Fonts

Urbane:
An all-purpose workhorse family with wide application. The larger x-height gives an open readability even in small sizes, while the range of weights and styles – italic, script, rounded, rough – make a large and versatile family.

Microsoft Office Fonts

Geist
In order to use PowerPoint and Word properly, fonts must be loaded onto your computer. PowerPoint will not alert you to missing fonts. Therefore, we recommend using Nunito as it's a default font on both Microsoft and Apple computers.

Bold for headlines

Regular for titles

Medium for subtitles

Light for body text

Photography

Showing real people draws in the emotion - people can see themselves in the situations, rather than being disconnected from the risk they face or the benefits of the product.

Our images should convey our complexity and humanity through a balancing of sharp focus and shorter depth of field that heightens the attention on one or more elements of an image.

Screenshots of our products, when added appropriately, can be an impactful component of our message to customers. Our goal displaying screenshots of our products is to underscore the message we are trying to convey as well as provide the appropriate context for customers and prospects.

When brand photography is not available, and custom photography is not feasible, we rely on stock imagery to tell our story. Also avoid obvious post-production or Photoshop effects.

Textures

Textures subtly reinforce the TigerGraph brand while adding visual interest to backgrounds and other graphics.

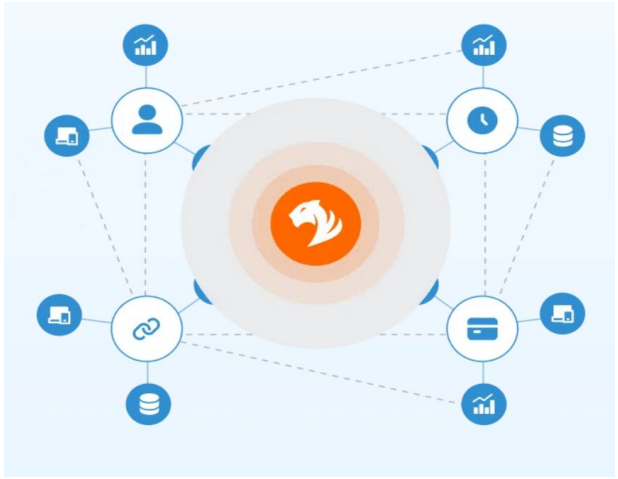

Each texture takes cues from the shape of the TigerGraph products and technology to form repeating patterns that can stand on their own as a design element or melt into the background.

Textures also extend the TigerGraph brand through their flexibility—they can be used at any scale, can be screen printed or embroidered, and can be incorporated into diagrams, illustrations, infographics, or ad concepts.

Screen Shots

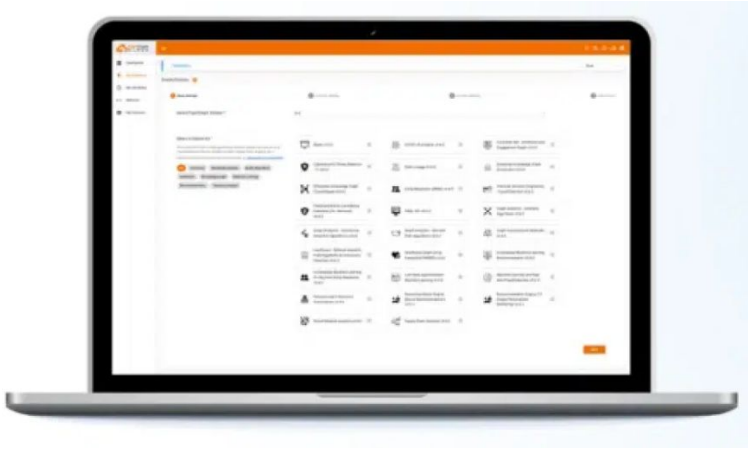

Screenshots of our products, when added appropriately, can be an impactful component of our message to customers.

To create the proper context and display our products working as they would in a customer's environment, always insert screenshots fullscreen.

Screenshots should be a minimum size of 1920px by 1080px.

Our goal displaying screenshots of our products is to underscore the message we are trying to convey as well as provide the appropriate context for customers and prospects.

Icongraphy

Icons help convey a message visually. Iconography can help simplify complex ideas or translate messages quickly.

From science to conceptual needs, every icon should share a similar style and structure to unify ourcommunications and contribute to a consistent brand experience that is unique to TigerGraph.

In some use cases, TigerGraph icons may appear in two colors to add contrast and dynamism to the palette.

When applying two colors, always use TG Blue and Black.
